

Saturn Token

The Saturn (STR) ecosystem features a fully scalable, decentralized, and quantum secure system for the transaction of digital currency.

White Paper

Updated October 10, 2021

Changes in brief

We are continuously iterating on the platform based on feedback from the saturn community. As a result, we have implemented the following improvement.

- New Smart Contract ID:
0xd1997448c4119af96ad55e4efcbe8225ebd90600
- Updated timeline.

Abstract

Saturn's goal is to bring the best blockchain initiatives to the global stage as soon as possible. We only promote a project that has fantastic teams. Holders will be part of the Saturn community that connects to the web a lot of people are looking for some of the next crypto tsunamis. Choosing a blockchain winner is akin to rocket science; it is difficult and painstaking. Saturn makes this process easier by evaluating projects with our community of blockchain and management experts. We define the solution the strengths as well as the weaknesses of its implementation; and work to close the gap. We are issuing 10,000 STR at 20 BEP on Binance Smart Chain. 50% The issued STR will be shared with the community.

3.2 Conclusion

1.1 Introduction

The role of social media in the cryptocurrency space cannot be ignored.

Bitcoin

creator Satoshi Nakamoto first introduced the cryptocurrency to the world via a

mailing list. The first Bitcoin transaction (10,000 BTC for 2 pizzas) happened via

Bitcoin Talk in 2010. In its early days, the crypto space received little coverage from

mainstream media. However, social media, chatrooms, and forums became the

megaphone for the market. Social media is the driving influence in the crypto space.

In December 2013, Dogecoin was designed and introduced as a joke coin.

Within the

first 30 days, the meme coin received over a million visitors to

Dogecoin.com, despite

its sarcastic character. Dogecoin's success can be linked to the cryptocurrency's

devoted community, often known as the Doge army, as well as backing from Elon

Musk, a very influential engineer and Tesla CEO who can raise Dogecoin's price with

only a tweet. Snoop Dogg, Gene Simmons, and Mark Cuban are among the Dogecoin supporters, in addition to Musk.

1.2 The Problem

Most crypto and blockchain projects, unfortunately, do not have the same level of visibility as Dogecoin. More than 2,000 cryptocurrencies have failed, according to Coinopsy, a firm that records deceased crypto projects. Some of these now-defunct projects have been documented as failures. Some of them were obvious rip-offs from the start. Others buckled under the weight of their expansion, and some of them abandoned their basic objective.

The reasons for these failures are based on the following frequent themes:

- a lack of funds
- Inability to acquire public trust.
- The idea was poorly executed.
- Lack of exposure to market
- No liquidity options for the community.

1.3 The Solution

Accelerate community vetted blockchain projects onto the global stage by creating a community of 150,000+ holders to generate viral exposure. Reward the community with returns on the increasing value of the community's liquid token, \$STR

1.3.1 The Platform

Technically speaking, Saturn uses best-in-class practices for software, safety and usability. This does not make us unique. Advantage

The saturn platform is a stable token strategy.

The saturn platform is constantly evolving in response to user input and our product plan. This is not a wait and see project. We design and deliver

Peculiarities

1.3.1.1 Addressing the lack of funds

Saturn's goal is to raise funds to continue the development of the decentralized exchange. for awesome blockchain projects. Issue "tokens" tied to an acceptable form meaning, the startup uses the PancakeSwap exchanger. It could be fiat currency. or a widely used cryptocurrency.

1.3.1.2 Addressing the Inability to acquire public trust.

When proposals are submitted,proprietary algorithms rank them to be reviewed by an analyst. Rejected proposals are subjected to a second manual evaluation to identify edge cases and change the algorithm so that we don't miss out on a good opportunity. Analysts examine the prioritized initiatives by following up on evidence to “vet” them for further consideration by the board (Community saturn Committee)This procedure is essential for sustaining public con dence. Individuals that have excelled in many facets of successful blockchain initiatives make up the Community saturn Committee. They are appointed for 2.5 years, with one year overlap with the previous committee.

saturn Launchpad. Some of the factors considered in the vetting process include:

- A doxed team.
- A competent team.
- A passionate team.
- An exciting project with a real use case.
- A project that can ultimately lead to more people being interested in blockchain technology.
- A project with known corporate partners (optionally).

1.3.1.3 Addressing the issue of poorly executed.

In the fast-paced world of blockchain, even outstanding ideas that pass all of the initial checkpoints will need to iterate and pivot. A Business Analyst is assigned to each project to keep the community informed about progress and milestones. When needed, the community will provide coaching and resources to assist a project's portfolio success.

1.3.2 The Community

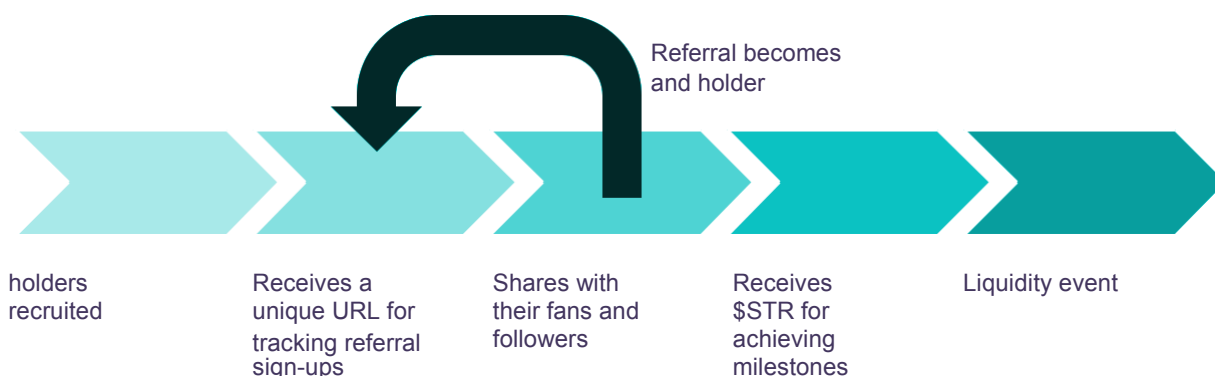

The community is the accelerant for the saturn platform.

Success breeds more success and viral loops will rocket great blockchain projects to global success.

1.3.2.1 Addressing the Lack of Exposure

The power of the community to provide viral awareness for exceptional initiatives is the key value proposition of saturn.

Diagram of a Viral Loop

Saturn achieves milestones by promoting the STR Community on the BSC network. When a new user joins, each recommendation contributes to a new goal. The affiliate marketing program is built on this foundation.

Attracting Top-Tierholders as pavecoin

The value of trust must percolate up from the holders who encourage us to be successful in developing a "trusted" platform. A saturn is a reliable information source, not a harmful actor with their own goal. The Community will have a method in place to "vet" holders, similar to how projects do. Abuse of the community's "spirit" will result in expulsion. Saturn will be used in a variety of fields, including crypto, social good, finance, and technology. They will comprise thought leaders and reliable information curators. As different as the intended audience, the platforms will be. Substack, Reddit, Twitter, Facebook, Instagram, Quora, LinkedIn, YouTube, Blogs, and many others are among the channels covered.

1.3.2.2 Addressing the Liquidity Issue

\$STR will be traded on popular crypto exchanges to address the issue of holder liquidity.

To participate in future projects on the Saturn platform investors will require \$STR. As more projects become available the demand for \$STR will increase. Exchangers will increase the value of \$STR relative to other popular token pairs. Since \$STR has a fixed supply this will further place upward pressure on the token's value. Ultimately, the Saturn platform will find a balance between an appreciating token connected to well-capitalized liquidity pools.

1.4 Building a Community of

150,000+

Community building is a critical path of saturn. We are introducing an entry point for holders and affiliates to monetize their fans. Previously, the risk of a bad recommendation and damage to the holder's brand outweighed the benefits of being in the crypto game. To achieve this, we will:

- Identify an agency partner with reach into holders, affiliates, and traditional media.
- Target holders and investors in technology, business, finance, and lifestyle.
- Execute a range of tactics that include:

Original content	Social Media	Press Release
SEO Optimization	Virtual and live events	Interviews

2.1 Tokenomics

Saturn is offering a BEP20 token based on the Binance Smart Chain. A total supply of 10,000,000. The token supply will be distributed as follows:

The saturn team has worked on the platform for some time. The vesting schedule for team-member has been allocated in a manner that protects the interest of token holders and team members. The team members will be allocated 15% of the tokens due to them immediately. The remaining 75% will be locked in a smart contract and released periodically. Team members cannot sell more than 30% of their token holdings per year.

2.2 Use of Funds

Saturn' main objective behind the crowd sale is to attract 150,000 crypto holders and marketing geniuses by Q4 2021. The proceeds from the exchangers will be allocated as follows:

2.3 \$STR Token Model

\$STR is the native currency of an ecosystem that serves as a launchpad for other cryptocurrencies. The success of the project depends partly on the role played by the community as well as the team leading the project. The stakeholders responsible for the ecosystem are governed by a system that rewards good actors and penalizes bad actors.

The two main functions of \$STR are:

1. **Trading.** Token holders can buy and sell \$STR tokens on listed exchanges. Supply and demand for STR tokens will determine its price valuation on the open markets.
2. **Utility.** \$STR token grants holders access to the platform and to engage in activities such as voting for projects and holders.

The growth of the platform will also depend on the trading volume and usage of the \$STR token. Each \$STR transaction contributes to the overall growth of the platform through a 10% tax fee where 4% is used to boost \$STR value, another 4% is distributed to token holders and the remaining 2% is reserved for marketing.

The \$STR smart contract is fully implemented by an experienced team of developers within the blockchain sector. The BEP-20 token is built on Binance Smart Chain. A special emphasis is placed on securing the smart contract to deter would-be-attackers. A regular smart contract audit will be carried out by an independent third party every quarter to detect loopholes and eliminate vulnerabilities.

Roadmap and Potential Developments

3.1 Roadmap

The roadmap outlines the planned direction and milestones for saturn from 2021

October 2021

- ★ Building a team.
- ★ Developing the pavecoin idea.

October 2021

- ★ Completing White Paper.

October and November 2021

- ★ Probit exchanger listing
- ★ Marketing and promotion.
- ★ Launch the saturn Podcast.
- ★ Telegram Support and FAQs.
- ★ CoinMarketCap listing
- ★ CoinGecko listing

November 2021

- ★ More holder collaborations.

November 2021

- ★ Continue to market and scale projects on the saturn platform.
- ★ Cross the 150,000 holder milestone.

3.2 Conclusion

Saturn is building a trusted community to kickstart vetted blockchain projects. The crypto market is still very young and has room for massive growth. Saturn success will be driven by the success of the projects it launches as well as the performance of its token - \$STR - on the exchangers.

Disclaimer: The purchase of \$STR tokens in the exchanger buy and sell does not constitute ownership in the company. The cryptocurrency market is highly volatile and tokens could be low or high in value.
